Decision Memo for Non-Autologous Blood Derived Products for Chronic Non-Healing Wounds (CAG-00190R)

Decision Summary

CMS is correcting section 270.3 of the national coverage determination (NCD) manual, entitled "Blood-Derived Products for Chronic Non-Healing Wounds," by deleting the following sentences, "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous non-healing wounds, will remain at local carrier discretion. Becaplermin is approved by the Food and Drug Administration." The correct statement should read "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous wounds, will remain nationally non-covered under Part B based on §1861(s)(2)(A) and (B) because this product is usually administered by the patient."

Non-Autologous Blood Derived Products for Chronic Non-Healing Wounds

FROM:

Steve Phurrough, MD, MPA Director Coverage and Analysis Group

Marcel E. Salive, MD, MPH Director Division of Medical and Surgical Services

Beverly Lofton, MHA Lead Analyst

Lori Paserchia, MD Lead Medical Officer SUBJECT: Decision Memorandum for Non-Autologous Blood Derived Products for Chronic Non-Healing Wounds

DATE: April 27, 2006

I. Decision

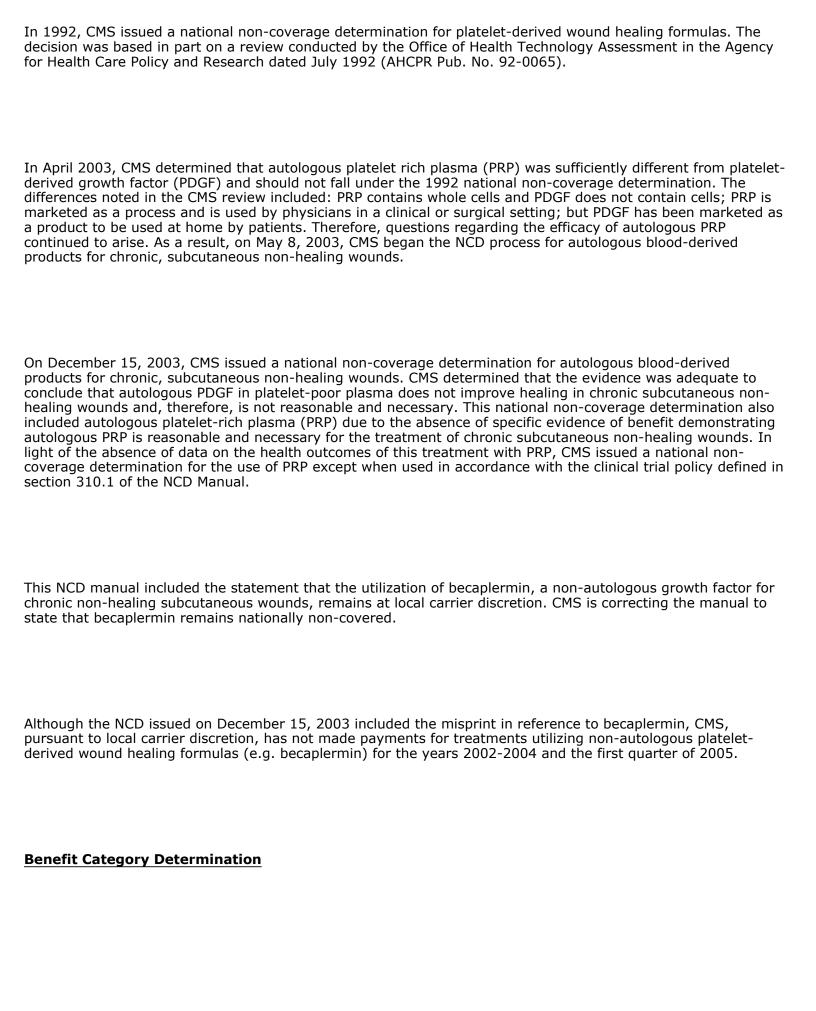

CMS is correcting section 270.3 of the national coverage determination (NCD) manual, entitled "Blood-Derived Products for Chronic Non-Healing Wounds," by deleting the following sentences, "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous non-healing wounds, will remain at local carrier discretion. Becaplermin is approved by the Food and Drug Administration." The correct statement should read "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous wounds, will remain nationally non-covered under Part B based on §1861(s)(2)(A) and (B) because this product is usually administered by the patient."

II. Background

After releasing a national non-coverage determination on Autologous Blood-Derived Products for Chronic Non-Healing Wounds in December of 2003, an error was printed in the NCD manual. The error reads, "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous non-healing wounds, will remain at local carrier discretion." While CMS makes every effort to provide accurate and complete information, the erroneous coverage statement printed in the NCD manual regarding non-autologous blood-derived products was not intended and not part of the Decision Memorandum posted on December 15, 2003. Non-autologous blood-derived products are not in the same class as the products referred to in the December 15, 2003 Decision Memorandum.

The stages of wound healing are sequential in the normal healing process of acute wounds. Since, the etiology of wounds vary, the most effective therapy may vary as well. Wound care must be directed at providing an environment in which the body can affectively carry out the healing process. Chronic wound therapy involves local wound care and systematic measures. (Decision Memo, CAG-00190N)

III. History of Medicare Coverage

For an item or service to be covered by the Medicare program, it must meet one of the statutorily defined benefit categories outlined in the Social Security Act. There is no independent Medicare benefit category for non-autologous PDGF used for topical administration. Becaplermin (Regranex®) is applied topically by the patient. To the extent that this or similar products are usually self-administrated, there currently is no applicable benefit category under Medicare. Additionally, we note that the determination of whether a treatment is self-administered is usually made by the carrier medical director.

IV. Timeline of Recent Activities

| 12/15/03 | Issued national non-coverage determination on autologous blood derived products for chronic wound healing. |
|----------|--|
| 07/23/04 | Issued NCD instructions for carriers in the NCD manual with incorrect language stating coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous wounds, will remain at local carrier discretion. |
| 06/23/05 | Received a decision of "no independent benefit category" from the Centers for Medicare Management on the use of non-autologous PDGF for chronic non-healing wounds. |
| 09/29/05 | CMS opens this national coverage determination (NCD). |

02/13/06 CMS released the Proposed Decision Memorandum for this NCD and

requested comments.

V. FDA Status

| The FDA approved the first biotechnology product to treat deep diabetic foot and leg ulcers in December Becaplermin was approved for the treatment of lower extremity diabetic neuropathic ulcers that extend subcutaneous tissue or beyond, and have an adequate blood supply. $\frac{2}{2}$ | |
|---|--|
| VI. Public Comments | |
| During the initial comment period, CMS received a total of three public comments that suggested possi clarifications to CMS policy. Those comments can be found on our website and the complete summary found in our proposed decision memorandum. | |
| CMS received two comments on the proposed decision memorandum. One commenter agrees with CMS proposed non-coverage for becaplermin and believes the product should be covered under Medicare's Repense to the commenter also suggested that clinicians prescribing this product should monitor patient of the component within CMS response, we will refer this comment to the component within CMS response administration of the Part D drug benefit. CMS will not be making a NCD regarding whether becaple be covered under Part D. | Part D drug outcomes onsible for |
| The other commenter opposed the CMS proposed decision and suggested that carriers should have discover becaplermin. However, this is not possible when there is no benefit category. In addition they suthat CMS should change the NCD manual and provide carrier discretion for coverage of platelet-rich plater acute surgical wounds. In response, CMS is not addressing PRP or acute surgical wounds in this decommemorandum and declines to make the suggested change at this time. | ggested Isma (PRP) |
| VII. Analysis | |

Becaplermin when self-administered, has no benefit category, therefore it cannot be covered under the Medicare program. The language placed in the coverage manual was in error and needs to be corrected.

VIII. Conclusion

CMS is correcting section 270.3 of the national coverage determination (NCD) manual, entitled "Blood-Derived Products for Chronic Non-Healing Wounds," by deleting the following sentences, "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous non-healing wounds, will remain at local carrier discretion. Becaplermin is approved by the Food and Drug Administration." The correct statement should read "Coverage for treatments utilizing becaplermin, a non-autologous growth factor for chronic non-healing subcutaneous wounds, will remain nationally non-covered."

¹ The Decision Memorandum posted on December 15, 2003 referenced becaplerin in section II of the memorandum, stating: "In 1997, FDA approved the biologics license application of Ortho-McNeil Johnson Pharmaceuticals, Inc. to market Regranex ® (becaplermin) Gel 0.01%. The recombinant human platelet-derived growth factor-BB (rhPDGF-BB) was approved for the treatment of lower extremity diabetic neuropathic ulcers that extend into subcutaneous tissue or beyond and have an adequate blood supply. It was not approved for superficial ulcers that do not extend through the dermis into subcutaneous tissue or ischemic diabetic ulcers. Since becaplermin is not an autologous product, we have elected to not address this product in this decision memorandum."
